

**Earthpaint™**  
because you care

**One Coat Wood Finish** beautifully protects wood and provides a high quality, sustainable alternative to polyurethane and other petrochemical products. Hard enough for floors and cabinets yet beautiful enough for fine furniture.

**One Coat Wood Finish** is naturally durable & water resistant. A luxuriously rich formula that is able to bring out the inherent elegance of wood while providing extra resilience. Ingredients such as flax oils and beeswax work to repel moisture and leave a buttery smooth finish, while gorgeous pine resins illuminate and strengthen the wood.

**Renewable Resources - Beeswax - Tree Resins -  
Replace Polyurethane - Reduce Greenhouse  
Emissions - Beautiful on Wood & Masonry**

**One Coat Wood Finish** is designed to seal and protect wood after just one application though a second coat may be desired to further increase the strength of the wood and create a smoother, glossier finish. Once applied, One Coat dries in a day or so and cures in 2-4 weeks like any paint. However, unlike paint One Coat does not simply rest on the surface but uniquely penetrates deep into the wood fibers. In this way, the fibers become hard, breathable and protected deep under the surface, naturally.

There is no need to worry about peeling polyurethane. If any area becomes worn, simply clean and rub more One Coat on. Earthpaint Wood Finishes are not only sustainable and non-toxic, they are some of the finest coatings you can apply to wood!
